CHALLENGE

1

2 points

git basics

1. Complete the git tutorial:

<https://git-scm.com/docs/gittutorial>

2. Use this as the project.tar.gz

3. Note the tutorial uses the `master` branch, but the new default is `main` you can use either.

CHALLENGE

2

1 point

GitHub basics

1. Create a GitHub account if you do not already have one
 2. Create a new repository within GitHub called beachbot-challenge-wk4
- For steps 3 onwards use a terminal (not an IDE or git GUI)
3. Add this GitHub repository as a remote within the local git repository you created from challenge 1. Hint, use the ``git remote`` command. The remote name should be ``origin``.
 4. Push the contents of your local repo to the GitHub repo with:
`git push -u origin main`
