1 point

Hello Python

1. Use a terminal (not an IDE) to install the pip package cowsay
2. Run an interactive python console
3. Print "Hello World!" to the console
4. Use cowsay to make the cow say "MOO!"
4. Add two numbers together and print the sum
5. exit the interactive python console

Virtual Environments

1. Use a terminal (not an IDE) to find where your default python interpreter is (i.e. show the path to python)
2. Show the version of this python interpreter
3. Create a virtual environment using the venv python module and your default python interpreter
4. Activate the virtual environment
5. Show the path to the virtual environment's python interpreter (it should be different)
6. Use cowsay to make the cow say "MOO!"
